360° ULTRASOUND SPEECH PROTECTOR

Description

The 360° Ultrasound Speech Protector is an ultrasound noise generator that is inaudible for humans but scrambles microphones. The conference table model can protect your voice conversation without the other party's knowledge.

Have any questions?

Call us at 514-259-4884.

It provides two functions to protect your voice conversations.

- Ultrasonic noise generator that is **inaudible** for humans but scrambles most microphones and recording devices.
- Acoustic noise generator specially designed to blend your voice and prevent recordings to be cleaned by audio software.

During an important business meeting we must ensure the confidentiality of our oral communications. A voice recording may be used as a blackmailing tool and can even destroy a reputation. Our system enables you to have a highly protected conversation with your interlocutors **without revealing that it is active**.
