GN2 CAMERA DETECTOR, PROFESSIONAL-GRADE ADVANCED LENSES DETECTOR

Description

This ultra-compact device for individual use is designed for detection of small-size video surveillance, camouflaged in the interior items such as clothing, household goods, handbags, cases etc.

The GN2 LED Detector, advanced lenses detector allows the detection of cameras equipped with micro lenses, including pinhole lenses within a very large distance.

This professional-grade tool provides probing radiation with white LED. This device has dioptic eyepiece adjustment ± 5 dioptres and 2 modes of operation; constant and impulse. These features allow to increase probability and accuracy of detection of any kind of video surveillance cameras secret or not, in comparison with usual surveillance
